We manufacture all our controlled drugs cabinets in our own factory here in the UK.

This cabinet conforms to BS2881:1989 (Security Level One). This which is the specification for Cupboards for the Storage of Medicines in Health Care Premises. Furthermore, surpasses the requirements of the "Misuse of Drugs (Safe Custody) Regulations 1973". This is the requirement in the UK for the storage of controlled drugs. We have designed this cabinet specifically, to store Controlled Drugs. The cabinet is constructed from at least 1.5mm thick steel.

All Controlled Drugs Cabinets are shipped including the necessary fixings and all standard locks (keyed to differ) are shipped with three keys per lock.

The design of our controlled drugs cabinets also sets us apart from our competitors. We use piano hinges to hold the doors in place. As a result, we increase the access size into the cabinet. Most of all this enables you to make better use of the internal space. The piano hinge is also stronger than other hinging methods, adding further to the security level offered by our cabinets.
